1 Introduction

Unictron’s A300A ultrasonic transducer is designed to deliver outstanding performance at around 300 kHz frequency. The transducer works as a signal transmitting and receiving unit. This ultrasonic transducer is particularly suitable for double layer detection, edge detection and web guiding, splice detection, label detection and proximity measurement, etc. It will work reliably regardless of materials under detection, for example: paper, glass, transparent plastics, shiny metal, cardboard, etc.

1.1 Model name

A 300 A

- A = type of transducer
- 300 = frequency 300 kHz
- A = Air transducer

1.2 Part number

H2KA300KA1CD00

1.3 Marking

Y M XX

- XX = Lot ID (serial number)
- M = Month code (A~M)
- Y = Year code (A ~ Z)

*Note: 1. Measured at 25±3°C, 45 to 60% RH.
2. Testing circuit setup: Driving signal: 10Vp-p, 300 kHz, burst number= 5 pulses, drive interval: 3.33ms, gain of receiving circuit: 60 dB (Please refer to 2.2 for details)
3. Dimensions of reflecting metal plate: 100x100mm, reflection distance: 100mm
2.2 Performance testing

Typical setup for sensitivity measurement

![Measurement setup diagram]

Circuit

Drive signal:
10 Vp-p; Frequency=300 kHz; Driving Interval=3.33ms;
Pulse n=5; Gain of receiving circuit: 60 dB
2.3 Typical directivity diagram

Directivity (for reference only)
3 Dimensions

Unit: mm
4 Operating and storage conditions

Operating:
Temperature: -20°C to +70°C
Maximum driving voltage: 50 V_{P-P}

Storage:
Temperature: -30°C to +70°C
Relative Humidity: 30-80%
Storage area shall avoid sulfur-containing materials. Sulfur may cause corrosion of electrode metals.
5 Packing

5.1 Inner box

6 Notes and references

6.1 Piezoelectricity
When exposed to high temperature or high voltage, piezoceramic materials may lose its piezoelectric properties due to depolarization.

6.2 Soldering
Please use the soldering tip to mount the transducer onto circuit boards. The temperature of the soldering tip should not exceed 360°C with maximum soldering time of 3 seconds. The transducer is not designed for reflow soldering process. Do not put the transducer in the reflow oven.

6.3 Electric connection
Do not connect transducer to DC voltage.

6.4 Installation
Noise may be induced when the transducer is subject to vibration. Please protect the transducer with buffer material at installation.

6.5 Not a water-proof device
The transducer is not hermetically sealed. Please don’t expose to water, organic solvents, and corrosive gases. Please also keep the surface of the transducer clean, do not touch the surface with skin and do not clean the surface with organic solvent.
Data presented in this specification were measured under the conditions specified above. When measuring conditions are different (e.g. relative humidity or ambient temperature), results may differ.

Information presented in this specification is believed to be correct as of the date of publishing. Unictron Technologies Corporation reserves the rights to change the specification without prior notice. Please consult Unictron’s engineering team about the latest information before using this product.
